Reliable EU FMD Compliance for Late-Starters

Laetus, April 2018. Laetus is presenting new last-minute serialization solutions for the pharmaceutical industry at ACHEMA. The EU FMD deadline is moving inexorably closer and there is not much time left to integrate customized systems into packaging lines and processes. Yet the Alsbach-based provider of solutions for inline quality control and supply chain traceability will be showing how the requirements can be implemented in a timely manner at Stand B 95 in Hall 3.0.

One option for producing the clear identification without significantly interfering with existing packaging processes is machinery for the pre-serialization of packaging. These place the necessary serialization data and, where necessary, additional information either on the label roll machinery or on folding boxes and subsequently verify it. The built-in identification software ensures the secure exchange of data with the superordinate IT.

There are reasons why it is necessary to integrate the serialization process in the packaging line. That is where standardized solutions come in, such as the smart pack handling systems MV-50 and MV-70 from Laetus. Preconfigured and with short delivery times, these can be implemented in existing processes at comparatively low costs and with less effort. Equipped with high-quality components – including an INSPECT camera system and a Wolke m600 oem printer – both systems reliably cover a range of identification requirements. The MV-70 also offers additional tamper evident labeling.

One alternative to in-house implementation is SaaS+ (Serialisation as a Service). Laetus and MSK Pharmalogistic will show how it works at ACHEMA using a smart MV-50. Since 2017, the two partners have offered their customers tracekey – an option to undertake serialization on demand or entirely. The service includes GDP-compliant transport into a temperature-controlled warehouse, storage under quarantine, preparation for dispatch, serialization and subsequent visual inspection, as well as data management and re-integration into the supply chain.

At ACHEMA, Laetus will show pharmaceutical manufacturers and contract packagers how they can use its carefully considered last-minute solutions to still reliably achieve their compliance objective. Other industries too – such as medical technology, baby food or animal health products and OEM machine manufacturers – can benefit from this experience and rely on Laetus' know-how in the areas of traceability of products and quality control.

Looking forward to deadlines with pre-configured pack handling systems MV-50 and MV-70

About Laetus

Founded in 1974, Laetus is an industry leader in inline quality inspection systems with thousands of successful installations of its renowned ARGUS, POLYPHEM, and INSPECT solutions across identification, fill inspection, and other quality control applications. With its Secure Track and Trace Solution (S-TTS), Laetus is also a leader in developing robust supply chain solutions for the Pharmaceutical, Medical, Cosmetics and FMCG industries enabling the requirements of all regulations regarding anti-counterfeiting to be fulfilled. Laetus partners with its customers to address their unique serialization and traceability requirements. Laetus has sold more than 18,000 systems across the globe including more than 42,000 Laetus cameras and sensors. Headquartered in Alsbach-Hähnlein, Germany, Laetus has significant scale to address the needs of customers worldwide with some 250 employees and direct sales and engineering operations in France, Germany, Italy, Spain, UK, the US, China, South America, and Mexico. In addition, Laetus has an extensive network of valued channel partners that extend Laetus' technical expertise in another 40 countries. In December 2015 Laetus has been acquired by Danaher. It operates as an independent business within the Product Identification Platform.
